

## Medical equipment testing, calibration and maintenance service

The original independent test and calibration company

### What is our service?

- In our annual visit our fully trained engineers are able to test and calibrate all of your medical equipment on-site.
- Valuable technical support and routine maintenance, all year round.
- Telephone technical support available 24 hours a day, seven days a week! If you have a problem that cannot be solved over the phone, we will send a local engineer directly to you.

### Why have your equipment maintained?

- 3 QOF POINTS (nGMS Contract, Management Point 7) are available to you when you have systems in place that ensure regular and appropriate inspections, calibration, maintenance and replacement of equipment.
- Cost efficient. Our on-site service is cheaper than sending items away! This means no down time of essential equipment, no loss or damage during transit and complete confidence with your equipment and its accuracy.
- Safety and accuracy: Be safe in the knowledge that all of your equipment is absolutely accurate and accounted for. We provide a professional folder for easy reference and QOF point inspection. Labels will identify all tested equipment. Our engineer will also highlight and explain to you any issues that have arisen and the corrective measures taken.

### What equipment needs to be checked?

All of your medical equipment needs to be checked. If you know roughly how many items you have, simply call us for an instant no obligation quotation. We are constantly updating the equipment we test, if you require an item to be calibrated which is not on our list, please do let us know.

### What is the difference between electrical and medical equipment testing?

Medical equipment is used for diagnosis and treatment, for example, BP Monitors and Scales. Portable Appliance Testing (PAT) is anything that has a 3-pin plug.

We PAT test all medical equipment free of charge. We are also able to PAT test all of your non-medical items.

- The trusted name in test and calibration, maintaining your equipment to the correct standards.
- ISO9001 quality assured for the provision of testing and calibration of medical equipment.
- NHS and nGMS contract compliant.
- Fully trained and accredited engineers, testing all manufacturers makes and models to original manufacturers' specifications.
- Nationwide coverage – 10 engineers covering all regions, at your convenience.
- The informed Practice Managers choice.

Call for a cost effective, tailor made quote. There is no call our fee and there are no hidden charges. Great savings for more than 10 surgeries! **For more information please contact the TAG Team on 0845 0707 800**

98% of work is carried out on-site, however, equipment can also be sent to us. Please just ask about our express return-to-base service.
